

## Preliminary dates NWP 2013

Dates are very approximate, and margins are rather generous; a full month for Greenland's west coast is probably quite a lot. On the other hand there are lots of interesting things to be seen between Gjøa Haven and Point Barrow. E.g. the Mackenzie River delta. Red dates refer to median date for ice break-up 1981 – 2010 (acc. to. Seasonal Outlook For North American Arctic Waters 2011)
